Burndown chart

Date	Issue	Event Type	Event Detail	Story Points Inc.	Dec.	Remaining
02/Sep/26 11:48 AM	SLESRP-10	Sprint start		0		
	SLESRP-12			0		
	SLESRP-14			0		
	SLESRP-15			0		
	Total					0
26/Aug/26 11:58 AM	SLESRP-10	Sprint ended by Anisha Nukul Niranjan				0
	SLESRP-12					0
	SLESRP-14					0
	SLESRP-15					0
	Total					0

Reflection

1. Did your estimations reflect the actual effort?

Yes. The story point estimates provided a reasonable representation of the relative effort and complexity of the user stories. Since the sprint was simulated, the estimates were mainly used to compare the relative difficulty of the selected work items.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized according to the importance and user impact of the requirements. Higher-priority stories related to core reservation, authentication, equipment availability, and cancellation functionality were considered before lower-priority supporting features.

3. How did your simulated sprint align with your plan?

The simulated sprint followed the planned Agile workflow. Selected user stories were moved through To Do, In Progress, and Done, and two sprints were completed successfully. This helped demonstrate how planned backlog items can be organized and completed within a sprint.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed the remaining work during the sprint and provided a visual indication of progress against the expected guideline. Since this was a simulated sprint, the chart mainly demonstrated how completed work and remaining work can be monitored to assess sprint progress and team capacity.
